

Activities in an Emergency after Occurrence of Tsunami Disasters

~ A topic in a different view point ~

Takashi TOMITA

Japanese PI of SATREPS of Chile
Port and Airport Research Institute, Japan

2010 Chile and 2011 Japan Tsunami Disasters

- ➔ Activities just after a disaster**
 - ✓ to save human lives
 - ✓ to sustain local communities

2010 Chilean & 2011 Japan events:

Shortage of fuel, food and water in the affected areas

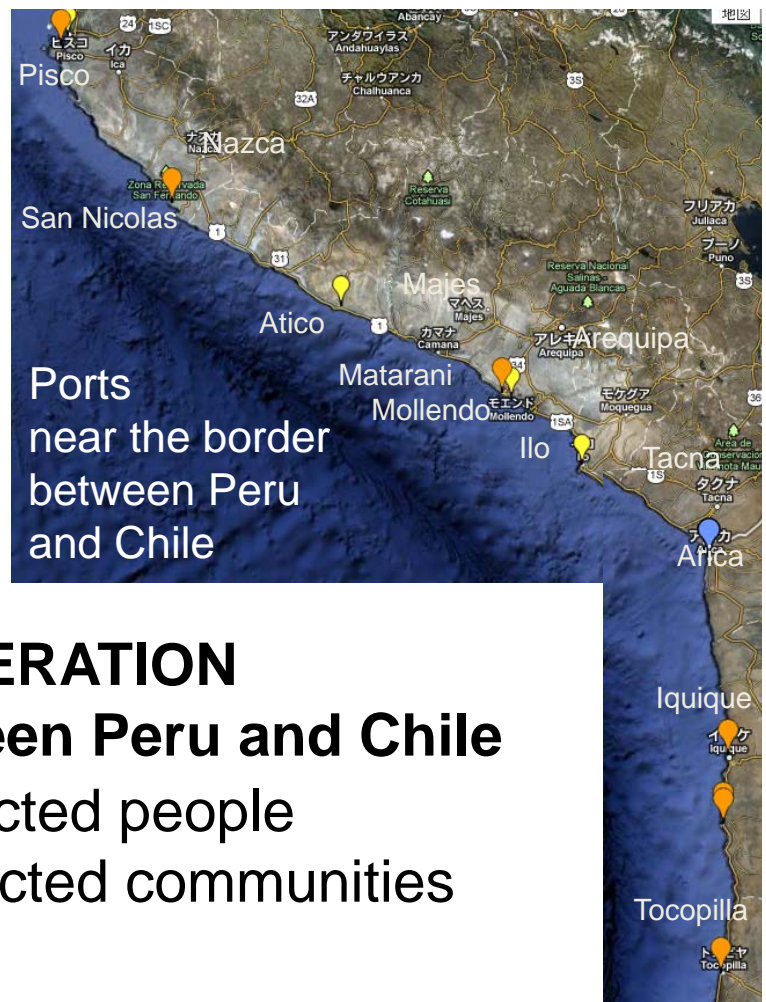

To dissolve lack of emergency supplies,
Ports & Harbors were used
to transport them from the sea
as well as roads and air

because of bridges collapsed by the earthquake and roads filled up by tsunami debris.

MULTI ROUTES
to transport
emergency supplies
for possible tsunamis

Immediate COOPERATION
between Peru and Chile
to rescue the affected people
to restore the affected communities

To plan the activities after the disaster

✓ **Damage estimation** as well as hazard estimation

✓ **Prompt restoration methods/measures**

For instance, tsunami debris covering the water surface of a port and sinking to the sea bottom were cleaned up to open the port

SUMMARY

Comprehensive cooperation

- ✓ to enhance the existing cooperation for emergency operation and exchange of tsunami information between Peru and Chile
- ✓ to proceed further with policies and measures of tsunami disaster mitigation

Enhancement of technology to develop tsunami-resilient community
